

25 Google Search Hacks to Make Life Easier

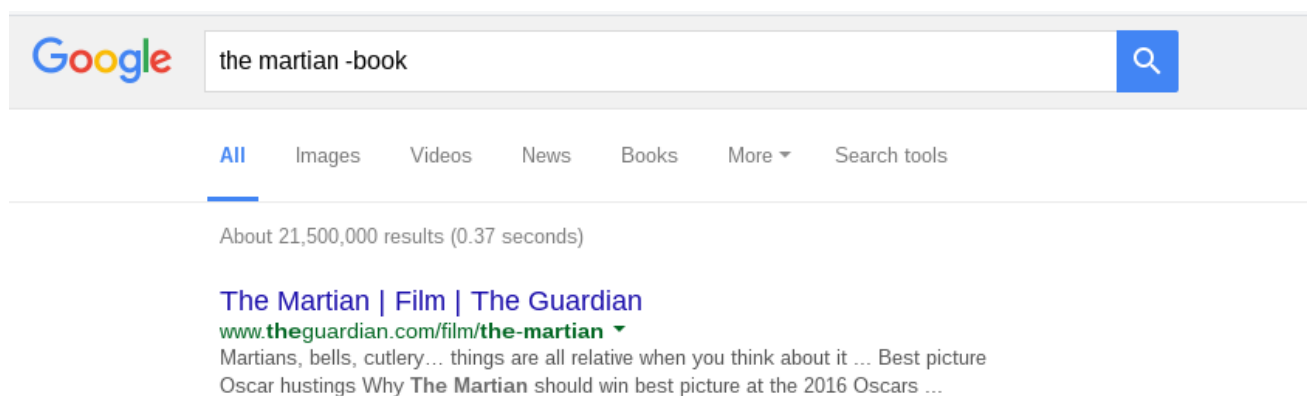

Everyday, millions of people use Google to search for one thing or the other on the web, but only a handful of those people are harnessing the full potential of the world's number one search engine. Here's a collection of hidden tips and tricks to help you get the most out of Google and get more relevant results to your search queries.

If you want to add to these tips, please do so in the comments section below.

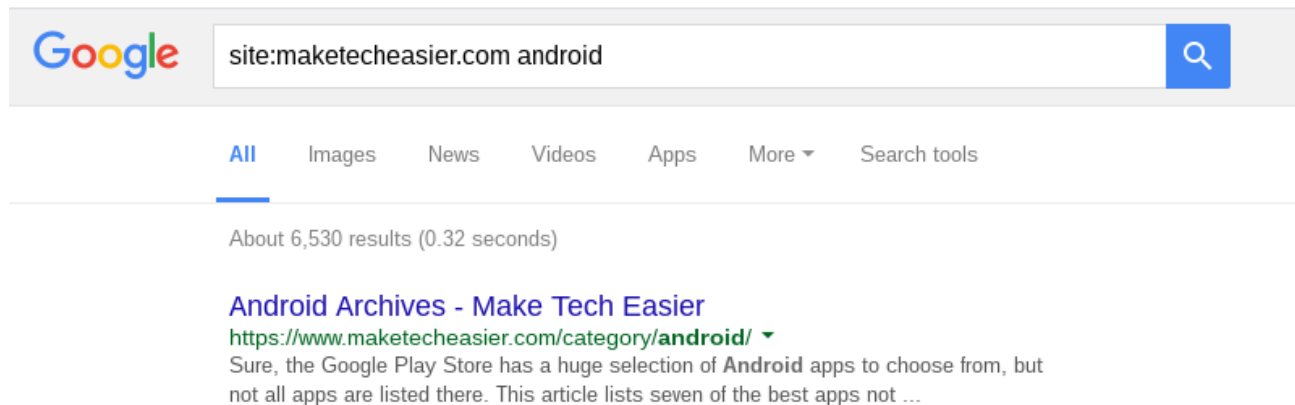

1. Search Exact Phrases – If you're looking for an exact phrase, use quotation marks around the keywords to view results containing that exact phrase.

2. Exclude a word – If your search terms contain a keyword with several meanings, you can exclude one of the meanings by adding a hyphen (-) before the keyword.

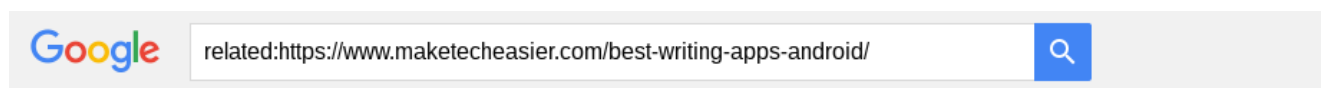

3. Search a specific domain – You can search within a particular URL by including the operator `site:example.com` before or after your keywords.

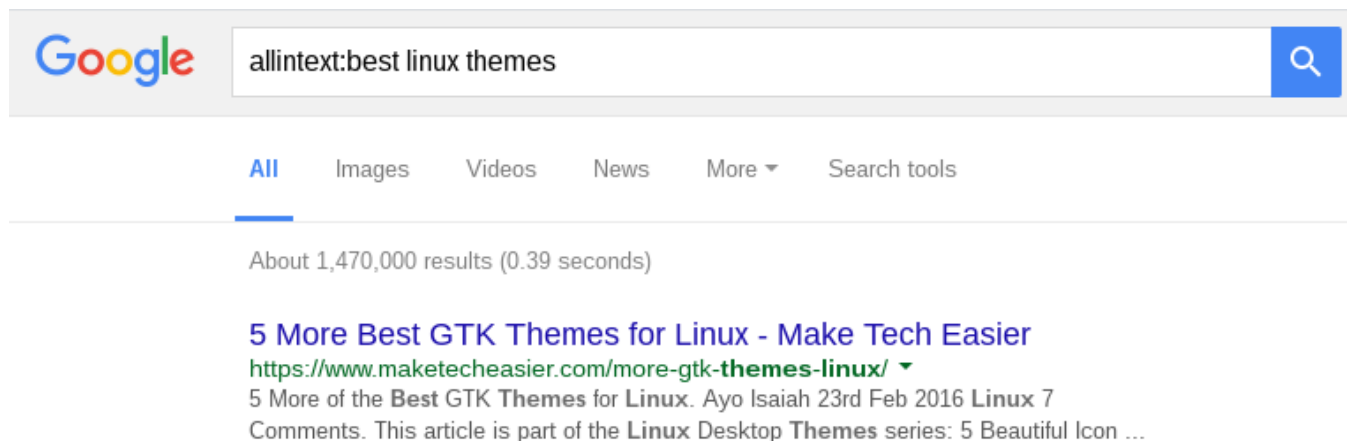

The screenshot shows a Google search interface. The search bar contains the text "site:maketecheasier.com android". Below the search bar, there are navigation tabs for "All", "Images", "News", "Videos", "Apps", "More", and "Search tools". The "All" tab is selected. Below the tabs, it says "About 6,530 results (0.32 seconds)". The first search result is titled "Android Archives - Make Tech Easier" with a URL "https://www.maketecheasier.com/category/android/". The snippet below the title reads: "Sure, the Google Play Store has a huge selection of Android apps to choose from, but not all apps are listed there. This article lists seven of the best apps not ...".

4. Generate similar content – To generate content similar to those found on a URL you already know, use the `related:` operator before adding the URL.

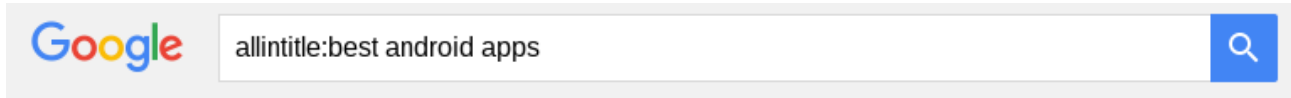

The screenshot shows a Google search interface. The search bar contains the text "related:https://www.maketecheasier.com/best-writing-apps-android/". There is a search button to the right of the search bar.

5. Search for words in text – To retrieve pages where all the keywords appear in the body of the page, use the `allintext:` operator before the search terms.

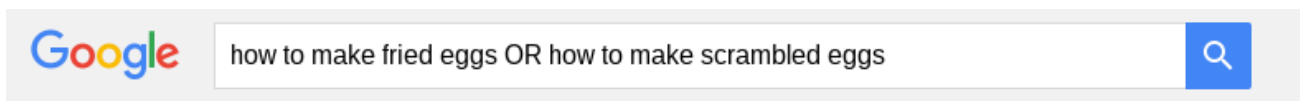

The screenshot shows a Google search interface. The search bar contains the text "allintext:best linux themes". Below the search bar, there are navigation tabs for "All", "Images", "Videos", "News", "More", and "Search tools". The "All" tab is selected. Below the tabs, it says "About 1,470,000 results (0.39 seconds)". The first search result is titled "5 More Best GTK Themes for Linux - Make Tech Easier" with a URL "https://www.maketecheasier.com/more-gtk-themes-linux/". The snippet below the title reads: "5 More of the Best GTK Themes for Linux. Ayo Isaiah 23rd Feb 2016 Linux 7 Comments. This article is part of the Linux Desktop Themes series: 5 Beautiful Icon ...".

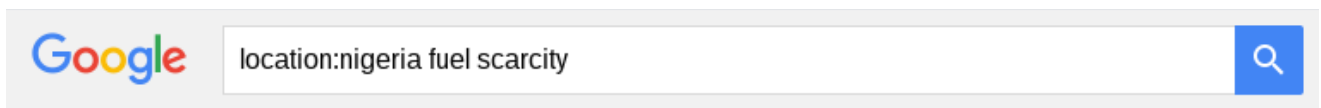

6. Search for words in title – Similar to No. 5, you can retrieve pages whose titles contain the keywords you're searching for by using the allintitle: operator.

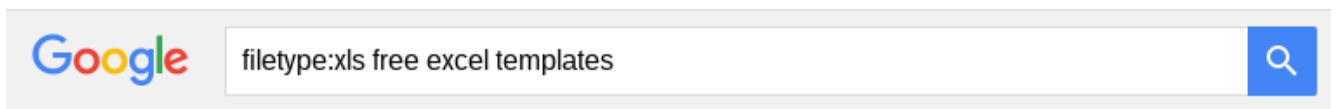

7. Search for multiple phrases – You can enter more than one query into Google at a time to view pages with one of the specified keywords. Just use a capitalised "OR" to separate the terms.

8. Find news by location – To look for news items emerging from a particular location, use the location: operator then add the city name.

9. Search by file type – If you're looking for a specific file on the web, you can use the filetype: operator to specify the particular document type you're searching for and Google will restrict results to pages contain those document types.

[XLS] Project Templates

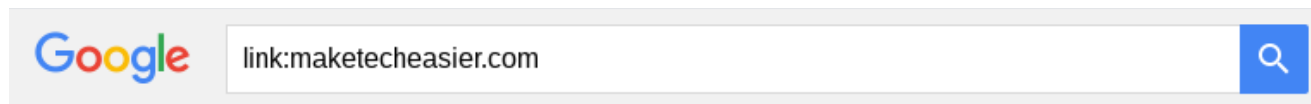

www.exinfm.com/excel%20files/Project_Templates.xls

... sheet allows you to detail your communication plan: how you are going to communicate, whom you will be communicating with, how often, in what format, etc.

10. Forgotten words – An asterisk acts as a wildcard to help you find the missing word in a phrase. You can also get suggestions by using Google’s auto-completion feature. Just type out the full phrase, then delete the word you want to replace.

11. Find a page that links to another url – Using the link: operator, you can find pages that link to another url. This is probably more useful for SEOs who are searching for backlinks to a specific page.

12. Perform calculations on Google Search – You can simple type in the sums and get the result instantly.
